

climbing

■ Climbing wall

The multiple salamander foot and handholds placed across the wall at various heights on both sides, enable users to select simple or more complicated routes according to their climbing ability. Selecting the difficulty level provides valuable experience for children in terms of risk assessment. The hole in the center of the wall tests users spatial awareness and can also provide a space to sit and relax before undertaking the next challenge. At nearly 3m wide and 3m high the wall provides space for multiple users, as well as offering the potential for interaction being users in the form of chasing games around the wall's surface.

sliding

■ Speed slide

The modern, innovative design of the speed slide encourages users to try out numerous different ways of coming down it or even climbing up it. By placing their legs either side of the bars or even coming down on their stomachs, it's the users who make up the rules.

hanging

■ Great arch

At over 4m long, the arch tests strength and agility as users swing from one bar to another to cross to the other side, whilst remaining above the ground. The equipment can also be used in an advanced way, by crossing over the top of the arch. As with nearly all the Ixo elements, its size makes it suitable for multiple users.

hanging

■ Barre fixe

The horizontal bar can be used either as a means of testing or improving strength levels by performing pull-ups or, alternatively, the bar can be used to perform acrobatic manoeuvres such as somersaults, improving flexibility and encouraging creativity.

climbing

■ Echelle droite delta

Enabling users to access the platform from ground level, the width (1m) of the straight ladder allows children to move both horizontally and vertically. The ladder is flexible meaning that children need to master their balance in order to ascend towards the platform. The wooden rungs are both user-friendly and durable.

■ Parrot mast

The pole enables children to take on the role of a fireman and slide down with their legs wrapped around the pole, whilst gripping with their hands. The height of the pole (2.4m) means that it provides a challenge at a testing height for the junior age group. The pole can equally be climbed up by users in search of a more advanced test of their strength and coordination.

■ Incline net

The net is accessed from below by climbing on to a stainless steel bar located 40cm off the ground. Once on the net, the 1.95m platform can be reached by negotiating the moving ropes, which provide a test of balance and coordination. The regular shape and size of the gaps in the nets provide reassurance to users.

meeting / role play

■ Tour Gamma

The large platform (2m x 1.25m), located 1.95m above the ground, provides space for multiple users at any one time and gives a great view out across the play area. Users can socialize, take the time to choose their next play activity, or even just take a break. The non-slip HPL platform is both robust and long lasting.

■ **Suspended platform**

The moving platform provides a real test for children's balancing skills, with the non-slip HPL surface providing grip even in wet conditions. In addition it can be used as a sitting area for one or more users, who want to take time out to socialize or simply to rest before undertaking the next play activity. In both cases the platform optimizes the space under the platform, providing an additional play feature without increasing the safer surfacing requirements.
