

sliding

The Torrent

Is it a slide? Is it a ladder? It's the users who decide. Taking its look from a mountain stream rushing through the rocks, the torrent provides either an access to a platform by climbing the stainless rungs or, alternatively, a quick way for users to descend from the unit by sliding down with their legs placed over the side bars.

Stainless steel slide HT: 1.37m

The slide enables users to experience the ever popular pleasure of sliding down to the ground from platforms located at different heights. A protective bar at the top of the slide prevents any accidental falls, as well as providing a support for users installing themselves on the slide bed. Additional support is provided in the form of the HPL side panels that border the stainless steel sliding surface.

1.17m: an introduction to sliding for the youngest users

1.37m: low level, to develop and improve sliding techniques

1.77m: sliding opportunities for the bravest users!

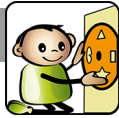

handling

Jet Plane Play Panel

This easily accessible play panel stimulates younger children's imagination as well as furthering their understanding of action and reaction through play. As they turn the steering wheel from the inside of the panel, they will see that people in the playground notice that the larger wheel on the outside of the panel has also started to rotate.

handling

■ Seat and table

Attached to the multi-play unit, the seating area provides a space for children to interact with each other or to take a moment to pause before going on to the next play activity. Users can either use the accompanying table as a basis for imaginary games or to play with toys that they may have brought with them to the playground.

■ Porthole Play Panel

The coloured portholes enable children to experience seeing the world in a different light. The panel introduces simple visual effects to young users, creating amusement as well as giving them an understanding of colour changes.

climbing

■ Curved ladder HT: 1.77m

The curved shape of the ladder adds an extra dimension to this classic platform access point. Children need to use both strength and coordination to climb the rungs of the ladder, before negotiating the gap between the ladder and the platform. It also allows them to conquer any fear of heights in a safe environment.

■ Steps - 2 years old

The staircase provides an access to the 1.17m platform for users from 2 years upwards. The steps are wide in design, and the staircase is equipped with a handrail to provide support and reassurance for younger users, who are still perfecting their balancing skills. The rubber coating on the steps provide comfort and grip underfoot, whilst being soft to the touch should users need to use their hands to help themselves up.

■ Star net

With its large dimensions (2.37m x 3m), the star net can welcome multiple users at any one time. The irregular size of the holes means that users get a real 3-D experience, passing through from one side of the net to the other with ease; this feature also allows children to play popular chasing games involving traversing the complete net surface.

getting across

■ Tunnel

The tunnel provides a connection from the 1.37m platform. Its design allows users of all sizes to comfortably pass through the tunnel; its length means that users are reassured by always seeing light at the end. It makes an ideal element not only for exploring, but also for hiding and taking time to relax or socialize with friends.

■ Compact platform - 3 posts HT: 1.17m

This spacious tower (1.2 x 0.6 x 0.6m) can accommodate a large number of users at any one time, whilst still providing ease of circulation. Play elements can be added to three sides of the unit. The tower is given a pleasing, traditional look, by its green HPL panels. The compact roof equally provides real shelter. The non-slip HPL platform provides ease of maintenance and durability.

1.17m platform: A low level platform that is suitable for younger users, and allows accompanying adults to reach users from ground level if required.

1.37m platform: An intermediate platform that provides an opportunity to develop and perfect physical skills.

1.77m platform: A high level platform for those users seeking real aerial challenges.

■ Stainless steel Platform - 4 posts HT: 1.37m

This spacious platform (1.2 x 1.2m) can accommodate a large number of users at any one time. Play elements can be added to four sides of the unit. The tower is given a modern design look, by its textured stainless steel panels, and its purple and orange colour scheme. The non-slip HPL platform provides ease of maintenance and durability.

■ Aluminium platform - 3 posts HT: 1.77m

This spacious (1.2 x 0.6 x 0.6m), triangular tower can accommodate a large number of users at any one time. Play elements can be added to three sides of the unit. The platform is protected on three sides by infill panels. These aluminium panels feature shapes cut out in the form of leaves, which not only give visual appeal but also cast interesting shadows across the playground at certain times of the day. Shade is provided in the form of a modern roof design. The non-slip HPL platform provides ease of maintenance and durability.

1.77m platform: A high level platform for those users seeking real aerial challenges.

■ Playhouse

The playhouse provides a private space for the youngest children to act out imaginary games and interact with other users. The design of the element, with the openings in the panels, provides visibility for those users wanting to look in from the outside. The roof of the playhouse provides both shade from the sun and shelter during inclement weather conditions.
