

# Balancing and climbing equipment

(technical specification)

J415

- 1- **The 125mm diameter post** is made of painted galvanised steel. The two-tone grey grained finish has a slightly undulating surface for increased scratch resistance. The cap is made of rotary moulded polyethylene.

- 2- **The climbing wall** is made from a 13mm thick compact material (HPL). Robust in construction, it has excellent weather and vandal resistance properties.

- 3- **The 16mm diameter ropes** are made of galvanised steel cable covered with polyester. The cables are linked together and held in place by injected polyamide spheres.

- 4- **The platforms** are made from a 12.5mm thick, textured, non-slip compact material (HPL). Further reinforcement is provided by lacquered galvanised steel supports, located on the underside of the platforms.

- 5- **The tubes** are made of 40mm diameter stainless steel, guaranteeing lasting durability and reliability of the equipment.

- 6- **Injection moulded polyamide fixings** connect the posts with the platforms and the various play features. They are non-toxic, flameproof and U.V. resistant. The thickness of the polyamide makes the equipment both strong and vandal resistant.

7- **The climbing holds** are made of polyamide for its strength and rigidity.

8- **The fixings** are made of stainless or plated steel and protected by anti-vandalism polyamide caps.
