

# Rope structures (technical specification)

J4801

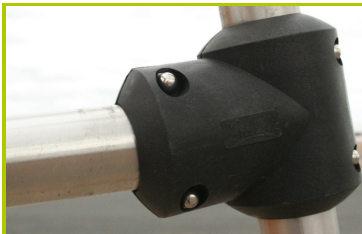

- 1- **The 125mm diameter posts** are made of painted galvanised steel. The grained finish has a slightly undulating surface for increased scratch resistance. The caps are made of rotary moulded polyethylene.

- 2- **The platforms** are made from a 12.5mm thick textured and non-slip compact material (HPL).

- 3- **The tubes** are made of stainless steel, guaranteeing lasting durability and reliability of the equipment.

- 4- **Injection moulded polyamide fixings** connect the posts with the platforms and the various play features. They are non-toxic, flameproof and U.V. resistant. The thickness of the polyamide makes the equipment both strong and vandal resistant.

- 5- **The pod** is made of 4mm thick polyester. It is a durable material and this ensures its resistance to weathering and UV radiation.

- 6- **The 16mm diameter ropes** are made of galvanised steel cable covered with polyester. The cables are linked together and held in place by injected polyamide spheres.

7- **The net fittings** are made of polyamide and are used to link three cords together.

8- **The net fittings** are made of polyamide.  
The fittings are composed of two distinct parts for ease of maintenance of individual strands.

9- **The footrests** are made of shock-absorbing rubber with non-slip surfaces.

10-**The floating steps** are made of shock-absorbing rubber with non-slip surfaces.

11-**The one-piece rail** is made of stainless steel, Ø 76.1mm, 3.6mm thick.  
The trolley is made of stainless steel ensuring its durability.

12-**The fixings** are made of stainless or plated steel and protected by anti-vandalism polyamide caps.
