

#### Fireman's pole

The pole enables children to take on the role of a fireman and slide down with their legs wrapped around the pole, whilst gripping with their hands. The height of the pole (2.4m) means that it provides a challenge at a testing height for the junior age group. The pole can equally be climbed up by users in search of a more advanced test of their strength and coordination.

# Speed slide

The modern, innovative design of the speed slide encourages users to try out numerous different ways of coming down it or even climbing up it. By placing their legs either side of the bars or even coming down on their stomachs, it's the users who make up the rules.

hanging

#### Barre fixe

The horizontal bar can be used either as a means of testing or improving strength levels by performing pull-ups or, alternatively, the bar can be used to perform acrobatic manoeuvres such as somersaults, improving flexibility and encouraging creativity.

### Rope ladder

Providing access to a 2m platform, the ladder tests the balance and coordination of users, who not only have to climb upwards, but also have to adapt to the horizontal movement of the ladder. Once at the top of the ladder spatial awareness is required to cross the gap between the ladder and the platform. The wooden rungs are at the same time user-friendly and durable.

### Echelle droite delta

Enabling users to access the platform from ground level, the width (1m) of the straight ladder allows children to move both horizontally and vertically. The ladder is flexible meaning that children need to master their balance in order to ascend towards the platform. The wooden rungs are both user-friendly and durable.

## Mât de vigie

Situated at 2.9m above the ground, the crow's nest is a real focal point for children to try to climb up and reach it. The carefully positioned climbing elements allow one or several children to reach the top of the post, before then taking some time out to sit in the crow's nest and chat or simply observe the rest of the playground.

#### Tour Gamma

The large platform (2m x 1.25m), located 1.95m above the ground, provides space for multiple users at any one time and gives a great view out across the play area. Users can socialize, take the time to choose their next play activity, or even just take a break. The non-slip HPL platform is both robust and long lasting.
