

sliding

Speed slide

The modern, innovative design of the speed slide encourages users to try out numerous different ways of coming down it or even climbing up it. By placing their legs either side of the bars or even coming down on their stomachs, it's the users who make up the rules.

rotating

Gyro

The gyro enables users to learn how to use and manipulate their body weight, in order to turn 360° or to undertake multiple revolutions, whilst maintaining their balance and coordination. The gyro can be first used in a sitting position in order to gain confidence before progressing to turning in a standing position.

climbing

Rope ladder

Providing access to a 2m platform, the ladder tests the balance and coordination of users, who not only have to climb upwards, but also have to adapt to the horizontal movement of the ladder. Once at the top of the ladder spatial awareness is required to cross the gap between the ladder and the platform. The wooden rungs are at the same time user-friendly and durable.

climbing

■ Incline net

The net is accessed from below by climbing on to a stainless steel bar located 40cm off the ground. Once on the net, the 1.95m platform can be reached by negotiating the moving ropes, which provide a test of balance and coordination. The regular shape and size of the gaps in the nets provide reassurance to users.

meeting / role play

■ Tour Gamma

The large platform (2m x 1.25m), located 1.95m above the ground, provides space for multiple users at any one time and gives a great view out across the play area. Users can socialize, take the time to choose their next play activity, or even just take a break. The non-slip HPL platform is both robust and long lasting.
