

climbing

■ Climbing wall

The climbing wall provides an alternative route to the 1.17m platform. The button climbing holds are user-friendly supports for children's hands and feet as they make their way up and across the climbing wall. The anti-slip surface of the climbing wall provides additional grip. Different coloured climbing holds give a decorative appeal, as well as allowing other users to be able to offer advice as to the best hold on which to place a hand or foot in order to advance upwards. Accompanying adults can help the users to improve their technique by advising them to push with their legs, whilst using their hands to direct their bodies across the wall surface.

sliding

■ Slide

The slide enables users to experience the ever popular pleasure of sliding down to the ground from platforms located at a height of 1.17m. A protective bar at the top of the slide prevents any accidental falls, as well as providing a support for users as they install themselves on the slide bed. The relatively steep gradient at the start of the slide provides exhilarating sensations, before slowing down users as they come towards the safer surfacing.

The mask seat-ledge is attached under the slide. This configuration optimises play space. It is an area for resting or quiet play, alone or in a group. The child can go unnoticed in this little hiding place decorated with knight helmets on either side!

handling

■ Dragon and Princess panel

This themed fencing has two games. One encouraging interaction between the inside and outside of the structure: the princess' hair is ideal for taking photos. An observation and thinking play activity: the child must turn the central disc to recreate the original design. Patience and concentration will be rewarded by the appearance of a dragon!

climbing

■ Stairway

This stairway provides easy, safe access to the platform 60cm above ground. Children are protected by full fencing which they can hold on to. Two handles also enable them to hold themselves in position easily for climbing up or down. The aluminium steps are equipped with an anti-slip, textured finish providing grip even in wet conditions. Two play activities are accessible from the ground on the sides of the stairway: A game to show/hide the spiders on their webs by turning a wheel, and a tactile play feature to remove the Excalibur sword.

getting across

■ Intermediate staircase

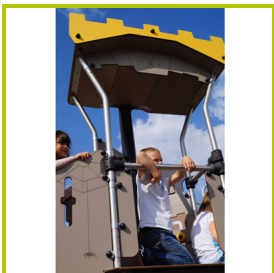

The intermediate stairway provides an inclined access from the 60cm platform to the 1.17m platform. The stairway is wide enough to allow users to pass, whilst narrow enough to provide reassurance for younger users climbing up for the first time. The aluminium steps are equipped with an anti-slip, textured finish providing grip even in wet conditions. The stairway is decorated with two play activities: a tactile play feature with a piece to be moved in a medieval shield (on both sides) and a touch game to recognise the spider on its web.

meeting / role play

■ Themed square platform

This compact platform located at only 60cm above the ground provides reassurance for the youngest users. Parents can hold the hand of children using play equipment for the first time. The solid materials used in the construction of the platform ? non-slip HPL and stainless steel ? ensure stability and long term durability.

■ Themed tower

This compact, rectangular platform (0.90 x 0.60m) is a place for stopping, resting and combining the various play activities. The compact roof add to the medieval theme, with the typical medieval features and coat of arms associated with the middle age. The floor is an anti-slip compact panel.
