

climbing

Slope

This access to the 60cm platform is an ideal element for the youngest users to practice their climbing skills on. The rounded, polypropylene holds are designed for users to place their feet on and push upwards, whilst a horizontal bar allows users to pull themselves up. Transferring from the ramp to the platform tests children's spatial awareness as they need to pass under the horizontal bar and between the two side panels.

sliding

Slide

The slide enables users to experience the ever popular pleasure of sliding down to the ground from platforms located at a height of 0.60m. A protective bar at the top of the slide prevents any accidental falls, as well as providing a support for users installing themselves on the stainless steel slide bed.

climbing

Stairway

This stairway provides easy and safe access to the platform 60cm above ground. Children are protected by full fencing which they can hold on to. Two handles also enable them to hold themselves in position easily for climbing up or down. The metal steps are equipped with an anti-slip, textured finish providing grip even in wet conditions. Two play activities are accessible from the ground, on the sides of the stairway: One letter recognition touch and visual play activity and a "hide/show the marmoset" game in which the user must raise the marmoset to see it. These features optimise the play space and develop children's imagination.

getting across

■ Closed bridge

The bridge provides an obstacle-free connection between two platforms. The side panels allow users to steady themselves as they cross the bridge or to simply take a break to look over the side at what is happening in the rest of the playground. A hole in the side allows children to look through and to see the world in a different way, or even to place their hands through the gap.

meeting / role play

■ Themed square platform

This compact platform located at only 60cm above the ground provides reassurance for the youngest users. Parents can hold the hand of children using play equipment for the first time. The solid materials used in the construction of the platform ? non-slip HPL and stainless steel ? ensure stability and long term durability.
