

1- The 125mm diameter posts are made of painted galvanised steel. The two-tone grey grained finish has a slightly undulating surface for increased scratch resistance. The caps are made of injection moulded polyamide.

J5407-M

2- The platform floors are made from a 18mm thick, non-slip polyethylene material.

3- The 16mm diameter rope is made of galvanised steel cable covered with polyester.

4- The tubes are made of 40mm diameter stainless steel, guaranteeing lasting durability and reliability of the equipment.

5- Injection moulded polyamide fixings connect the posts with the platforms and the various play features. They are non-toxic, flameproof and U.V. resistant. The thickness of the polyamide makes the equipment both strong and vandal resistant.

6- The climbing holds are made of polypropylene. They are non-toxic, inflammable and shock and UV resistant. They give the units their strength and help to protect them from vandalism.

Proludic

7- Injected aluminium elements are fixed on the posts with self-drilling screws to provide links between the ropes and the posts.

8- The fixings are made of stainless or plated steel and protected by anti-vandalism polyamide caps.
