

sliding

Speed slide

The modern, innovative design of the speed slide encourages users to try out numerous different ways of coming down it or even climbing up it. By placing their legs either side of the bars or even coming down on their stomachs, it's the users who make up the rules.

rotating

Le Gyrospire

Hanging from a beam located at 2.25m, the Gyrospiral turns 360°, allowing users to hang, swing or even perform tricks. It provides a test of the user's coordination, strength and creativity. When used by a group, onlookers can give marks for the quality and difficulty for the tricks being performed.

Gyro

The gyro enables users to learn how to use and manipulate their body weight, in order to turn 360° or to undertake multiple revolutions, whilst maintaining their balance and coordination. The gyro can be first used in a sitting position in order to gain confidence before progressing to turning in a standing position.

climbing

■ Echelle droite delta

Enabling users to access the platform from ground level, the width (1m) of the straight ladder allows children to move both horizontally and vertically. The ladder is flexible meaning that children need to master their balance in order to ascend towards the platform. The wooden rungs are both user-friendly and durable.

■ Mât de vigie

Situated at 2.9m above the ground, the crow's nest is a real focal point for children to try to climb up and reach it. The carefully positioned climbing elements allow one or several children to reach the top of the post, before then taking some time out to sit in the crow's nest and chat or simply observe the rest of the playground.

meeting / role play

■ Suspended platform

The moving platform provides a real test for children's balancing skills, with the non-slip HPL surface providing grip even in wet conditions. In addition it can be used as a sitting area for one or more users, who want to take time out to socialize or simply to rest before undertaking the next play activity. In both cases the platform optimizes the space under the platform, providing an additional play feature without increasing the safer surfacing requirements.

■ Tour Gamma

The large platform (2m x 1.25m), located 1.95m above the ground, provides space for multiple users at any one time and gives a great view out across the play area. Users can socialize, take the time to choose their next play activity, or even just take a break. The non-slip HPL platform is both robust and long lasting.
