

Multi play structures

(technical specification)

J4939

1- The different posts (average diameter: 60 to 80mm / 100 to 120mm / 120 to 140mm) are made from sap free robinia. The robinia is sanded and has had its bark removed. Robinia is naturally rot proof and does not require any additional chemical protection; it is equally extremely resistant to attacks from external sources (insects, fungi, climatic variations), guaranteeing the long term durability of the playground equipment.

2- The panels, the climbing walls and the tunnel are made from larch (plank sizes 140 x 27mm / 45 x 68mm). Larch is naturally resistant and long lasting.

3- The roofs are made from larch logs (80 x 40 mm).

4- The platforms are made from a 12.5mm thick, textured, non-slip compact material (HPL). Further reinforcement is provided by galvanised steel supports, located on the underside of the platforms.

5- The slides are made of stainless steel.

6- The fixings are made of stainless or plated steel and protected by anti-vandalism polyamide caps.
